Abstraction

This is a game but also an experiment with the aim of assimilating a global Quantum Consciousness Awakening.

I Propose that the only way to transcend our duality is to transcend our duality.

We are who we are but what are we?

# Man is incompetent and not one person can dispute the fact that we are barely out of the jungle.

# Introduction

## The Great Con Of Man

The Scientific and Academic community and entire body of knowledge is suspect!

Im calling foul play on Science because it missed a big spot in Evolutionary Biology.  that spot is what gave birth to the logic that gave way to human intelligence in the first place and is the answer to most of the mystery's of existence and is a hypothesis that i believe can prove God and introduce an avenue in calculation..
a big piece that was conveniently left out of the puzzle that explains our duality and can be applied to every facet of our lives.

Survival of the fittest is superseded by Natural Selection. Dominance hierarchy is the creation of politics and the very exploit that is everywhere. its all around us in every aspect. if you know pain you know the game and i believe the source and starting point of the very schism i wish to create is born from Mimicry and Mimetics.

but to set the stage as a starting point of this Hypothesis is the following:

The core of my hypothesis:

In evolutionary biology, **mimicry** is a similarity of one organism, usually an animal, to another that has evolved because the resemblance is selectively favoured by the behaviour of a shared signal receiver that can respond to both.[1] Mimicry may evolve between different species, or between individuals of the same species. Often, mimicry evolves to protect a species from predators, making it an antipredator adaptation.[2]The resemblances that evolve in mimicry can be in appearance, behaviour, sound or scent. Mimicry may be to the advantage of both organisms that share a resemblance, in which case it is a mutualism, or mimicry can be to the detriment of one, making it parasitic or competitive. Mimicry occurs when a group of organisms,[a] the mimics, evolve to share perceived characteristics with another group, the **models**. The evolutionary convergence between groups is driven by the selective action of a signal-receiver or dupe.[3] Birds, for example, use sight to identify palatable insects, whilst avoiding the noxious ones. Over time, palatable insects may evolve to resemble noxious ones, making them mimics and the noxious ones models. In the case of mutualism, sometimes both groups are referred to as "co-mimics". It is often thought that models must be more abundant than mimics, but this is not always so.[4] Mimicry may involve

numerous species; many harmless species such as hoverflies are Batesian mimics of strongly defended species such as wasps, while many such well-defended species form Mullerian mimicry rings, all resembling each other. Mimicry between prey species and their predators often involves three or more species.[5]

more specifically in regards to homo sapiens:

Sexual mimicry
Sexual mimicry occurs when one sex mimics the opposite sex in its behavior, appearance, or chemical signalling. It is more commonly seen within invertebrate species, although sexual mimicry is also seen among vertebrates such as spotted hyenas. Sexual mimicry is commonly used as a mating strategy to gain access to a mate, a defense mechanism to avoid more dominant individuals, or a survival strategy. It can also be a physical characteristic that establishes an individual's place in society. Sexual mimicry is employed differently across species and it is part of their strategy for survival and reproduction. Examples of sexual mimicry in animals include the spotted hyena, certain types of fish, passerine birds and some species of insect among others. These are cases of intraspecific sexual mimicry, but interspecific sexual mimicry can also occur in some plant species, especially orchids. In plants employing sexual mimicry, flowers mimic mating signals of their pollinator insects. These insects are attracted and pollinate the flowers through pseudocopulations or other sexual behaviors performed on the flower.

**Mimesis** (/maɪˈmiːsəs/; Ancient Greek: μίμησις (*mīmēsis*), from μιμεῖσθαι (*mīmeisthai*), "to imitate", from μῖμος (*mimos*), "imitator, actor") is a critical and philosophical term that carries a wide range of meanings, which include imitation, representation, mimicry, *imitatio*, receptivity, nonsensuous similarity, the act of resembling, the act of expression, and the presentation of the self.[1] In contradistiction to diegesis with its requirement of detachment, all this presumes involvement on the part of the participants.

Monkey See, Monkey Do.

A **meme** (/miːm/ *MEEM*[1][2][3]) is an idea, behavior, or style that spreads from person to person within a culture—often with the aim of conveying a particular phenomenon, theme, or meaning represented by the meme.[4] A meme acts as a unit for carrying cultural ideas, symbols, or practices, that can be transmitted from one mind to another through writing, speech, gestures, rituals, or other imitable phenomena with a mimicked theme. Supporters of the concept regard memes as cultural analogues to genes in that they self-replicate, mutate, and respond to selective pressures.[5]

## Evolutionary Fork:

i propose that a fork in evolution has taken place that has lead us to today, that fork is what Theists will be able to understand as the serpent in the garden. the great deceiver.

Its simple. If you have ever had or seen a dog or a cat you know that despite the vast difference in behavior that separate those 2 creatures one is certain. that animal can feel fear and excitement.

i propose that there is a mechanism of Evolution that creates a fork and battle between what was once the

Alpha Somatic but now the Beta Somatic vs the Alpha Cerebral.
when an Apex predator emerges and survival is all but guaranteed Evolution has a fail safe which is evolving Cerebral and intelligence functions that supersede survival mechanisms because survival of the apex is now irrelevant and survival of all the rest of the ecosystem is now threatened.

the cerebral uses sexual mimicry to pass his beta inferior but intelligent genes behind the alpha males back. Literally.
there are “lower” species that are known to practice the following mating rituals and habits:

the Alpha male guards the nest of females and the beta males adapt to mimic females and gain access to the nest. and spread there inferior but now superior cerebral genes.
its all a giant ruse until you transcend black and white/binary/cerebral vs somatic way of thinking by incorporating both.
the somatic cerebral. the best of both.

Evolution missed a spot and science, politics, government, academia and the entire system is suspect.

## How can it be Proven?

Modern technology more than provides the means and opportunity to prove my Hypothesis.

Magnetic resonance imaging (MRI) uses a powerful magnetic field, radio waves and a computer to produce detailed pictures of the body's internal structures that are clearer, more detailed and more likely in some instances to identify and accurately characterize disease than other imaging methods. It is used to evaluate the body for a variety of conditions, including tumors and diseases of the liver, heart, and bowel. It may also be used to monitor an unborn child in the womb. MRI is noninvasive and does not use ionizing radiation.

Im not putting forward any breakthrough information all ive done is put together a puzzle using the information that has been available for a long time.

So why has an Internet Troll pieced together a grand unification theory of everything?

“If you are looking for the guilty you need only to look in the mirror.”

The Predatory Gaze and Hypnosis

The **thousand-yard stare** or **two-thousand-yard stare** is a phrase often used to describe the blank, unfocused gaze of soldiers who have become emotionally detached from the horrors around them. It is also sometimes used more generally to describe the look of dissociation among victims of other types of trauma.

**Hypnosis** is a state of human consciousness involving focused attention and reduced peripheral awareness and an enhanced capacity to respond to suggestion. The term may also refer to an art, skill, or act of inducing hypnosis.[1]

Theories explaining what occurs during hypnosis fall into two groups. *Altered state*theories see hypnosis as an altered state of mind or trance, marked by a level of awareness different from the ordinary conscious state.[2][3] In contrast, *nonstate*theories see hypnosis as a form of imaginative role enactment.[4][5][6]

During hypnosis, a person is said to have heightened focus and concentration. The person can concentrate intensely on a specific thought or memory, while blocking out sources of distraction.[7] Hypnotised subjects are said to show an increased response to suggestions.[8] Hypnosis is usually induced by a procedure known as a hypnotic induction involving a series of preliminary instructions and suggestion. The use of hypnotism for therapeutic purposes is referred to as "hypnotherapy", while its use as a form of entertainment for an audience is known as "stage hypnosis". Stage hypnosis is often performed by mentalists practicing the art form of mentalism.

I would like to think that the founders of modern psychology would concur with my hypothesis, Unfortunately Psychology has become a thriving business in the pharmacological and medical industry's and is no longer built upon the life work of Sigmund Freud and Carl Jung.

This is why I am making claims that the entire system and body of knowledge is suspect as its all been here all along.

Ecology, The Biosphere, Evolutionary Biology and God in the system.

37.2 trillion cells in the human body working in harmonious unison every minute of everyday just to keep your heart beating and you breathing and it does so until the day you die.

To think of the Earth as any less of a system is
